Why choose Dekro Roman Blinds?

Roman blinds are currently the most popular window decoration, emphasizing the character of the room. The option to choose fabric and sewing methods makes this decoration suitable for both classic and modern interiors. We offer a wide collection of fabrics specially selected for Roman blinds. In our collection, you will find sheer/curtain fabrics that accentuate the subtlety of the arrangement and add lightness to the room, as well as heavy curtain fabrics that can block sunlight and give a personalized character to any space.

The extensive selection of fabrics from Polish and international manufacturers (Spain, Italy, Turkey) makes our Roman Blind offering unique and unparalleled. We have fabrics in our collection from which we can tailor Roman blinds "to fit every budget." This collection includes fabrics directly designed for Roman blinds (such as tunnel fabric) and fabrics specifically dedicated to investments (e.g., with FR fire resistance certificates).

Dekro Roman Blinds

Models and Sewing Methods of Roman Blinds

ROMAN BLIND SEWN FROM TUNNEL FABRIC

Roman Blind Sewn from Tunnel Fabric **Group: 7710, 9734, Natural, Voile, etc.**

Tunnel fabric is characterized by a constant distance between the tunnels (also known as boning, rods, sticks, bars). Depending on the fabric group, the distance from the center to the center of the tunnel ranges from 22 cm to 25 centimeters. On each of these "tunnels," every 3.5-4.5 centimeters, there are woven threads through which we weave cords coming out of the drum, eliminating the need to sew additional guiding rings. A ready-made tunnel for the rod.

The fabric groups have a distance from the center to the center of the tunnel ranging from 22 cm to 25 centimeters.

Dekro Roman Blinds

ROMAN BLIND SEWN WITH FRONT TUNNELS

Sewing a Roman blind using various curtain fabrics, especially those with smooth textures, opens up excellent possibilities for personalization. A key element in this process is the choice of the side on which the rod tunnel, commonly known as the pocket, will be placed. This choice significantly influences the overall appearance and functionality of the blind.

In the case of this model of Roman blind, the tunnels are carefully sewn with specified spacings, adapted to the height of the blind. Typically, the distances between consecutive tunnels range from 20 to 30 cm. This is crucial because these spacings affect the even lifting and lowering of the blind, which is crucial for its functionality. It's worth noting the differences between a Roman blind with front tunnels and one with back tunnels. In the case of a blind with front tunnels, the pockets are visible from the inside of the room. This serves as an interesting decorative element that can enhance the interior. However, from the external perspective, only subtle seams remain on the fabric, creating an elegant, minimalist look.

The sewing of a Roman blind with curtain fabrics is a design process that allows for full personalization and adaptation of the blind to individual preferences and the character of the interior. By choosing the appropriate side of the tunnel and considering the placement of the pockets, we can create a blind that not only effectively fulfills its purpose but also serves as a unique decoration for any room.

Dekro Roman Blinds

ROMAN BLIND SEWN WITH BACK TUNNELS

Sewing a Roman blind using various curtain fabrics, especially those with a smooth texture, opens up a wide spectrum of design possibilities. One of the key aspects of this process is choosing the side on which the rod tunnel, commonly referred to as the pocket, will be sewn. This choice can significantly impact the aesthetics and functionality of the blind.

In the case of this specific model of Roman blind, the tunnel is precisely sewn, taking into account specified spacings adapted to the height of the blind. Typically, the distances between consecutive tunnels range from 20 to 30 cm. This is important because these spacings affect the even lifting and lowering of the blind, which is crucial for its functionality.

It's worth noting that in the case of a Roman blind with pockets at the back, i.e., with tunnels placed on the window side, these pockets are a visible element on the exterior side of the window. This can be utilized to create an impressive window decoration from the outside, adding a touch of style and color to the entire room. However, on the interior side of the window, the fabric remains flat and smooth, with only evenly spaced seams visible, creating an elegant and minimalist look that blends seamlessly with the interior.

The entire process of designing a Roman blind with curtain fabrics is fascinating and offers many opportunities to express creativity, allowing the creation of a blind that perfectly suits the character and style of the specific interior.

Dekro Roman Blinds

ROMAN BLIND SEWN WITH HORIZONTAL TAPES

A Roman blind with horizontal tapes is a unique construction that stands out due to the absence of visible tunnels or pockets on the fabric itself. In this case, instead of tunnels, horizontal tapes are sewn onto the blind, playing a crucial role in stiffening the structure of the blind. These tapes are where rods are placed, providing the blinds with the necessary rigidity and shape. Importantly, horizontal tapes are equipped with subtle protrusions or eyelets through which a cord is threaded. This cord is crucial for the proper folding and unfolding of the blind. Thanks to this design, the user can smoothly adjust the level of the blind, customizing it to their needs.

This solution proves excellent, especially for fabrics adorned with patterns. Sewing blinds on horizontal tapes eliminates the need to create tunnels, ensuring that patterns on the fabric remain intact and fully visible. This is significant if maintaining the aesthetics and character of the fabric is important while still desiring the functionality of the blind. Roman blinds with horizontal tapes are an excellent choice for those who appreciate both unique design and the practical use of windows in their interior. With these blinds, you can enjoy the elegant look of the fabric without sacrificing the pattern, all while benefiting from the intuitive operation of the blind.

ROMAN BLIND SEWN WITH VERTICAL TAPES

W PEŁNI
ZACHOWANY
WZÓR NA
ROLECIE

A Roman blind with vertical tapes is a unique solution characterized by subtle elegance and exceptional lightness. When the Roman blind with vertical tapes is unfolded, the surface is smooth and flat, creating an elegant look that fits perfectly into various interior styles. However, it's when the blind is folded with the vertical tapes that its unique charm appears. At that moment, the fabric gently falls between the tapes, creating subtle folds. These folds, although delicate, give the blind a distinctive charm and lightness, making it a decorative element in itself. The sewing method for blinds with vertical tapes is ideal, especially for light fabrics often used in window decorations, such as sheer curtains. This solution allows you to fully utilize the delicacy and subtle structure of such fabrics, creating a window adorned with a blind that adds charm and elegance to the entire room. A Roman blind with vertical tapes is a choice for those who appreciate a subtle look and lightness in their interiors while maintaining the full functionality of the windows. It's the perfect solution for decorative fabrics that emphasize the character of any room.

Dekro Roman Blinds

The wavy Roman blind is a unique construction that differs from traditional blinds not only in its operation but also in the visual effect it offers. What sets this blind apart is the constant waves that maintain their elegance and form both when the blind is raised and when it is lowered. As a result, the room gains a consistent decorative effect that remains consistently beautiful.

The waves in wavy blinds are characterized by regularity and uniform size, adding a unique charm to the room. These perfectly shaped waves serve as a decorative element in themselves, creating a harmonious arrangement and adding elegance to every window. One of the key advantages of this solution is that, despite the use of tunnels in the sewing process, they are completely invisible when the blind is hanging. This means that all attention is focused on the waves and the fabric, rather than on structural elements. This solution perfectly combines functionality with aesthetics, offering the user a blind that not only protects against excessive sunlight but also serves as an elegant decoration for any interior.

ROMAN BLIND "WAVY"

The wavy Roman blind is an excellent choice for those who appreciate a consistent, elegant decorative effect in their spaces without compromising on functionality and ease of use. It is a solution that combines the beauty of form with the practicality of application.

"SPECIAL CLIP SYSTEM AND DOUBLE CORD ON THE DRUM"

Dekro Roman Blinds

DAY/NIGHT ROMAN BLIND (DUO)

The Day/Night Roman Blind is an exceptional solution, representing an excellent choice for any room by combining an elegant design with extraordinary functionality. This innovative blind system is characterized by two parallel rails equipped with Velcro. One of these rails is used to mount sheer curtain fabric, while the other carries blackout fabric.

What makes this blind unique is the ability to independently control both fabrics. Using separate chains, the user has full control over the blind. You can freely choose when to lower the sheer curtain fabric to allow gentle light into the room or lower the blackout fabric to ensure increased privacy and darkness.

Thanks to such a solution, the Day/Night Roman Blind ensures flexibility to adapt to changing needs and circumstances. It is an excellent tool for both adjusting the lighting in the room and maintaining privacy in an elegant and stylish manner. The Day/Night system is an outstanding proposition for those who value not only functionality but also aesthetics and the ability to adjust lighting to different situations and moods. This blind combines modern design with practical solutions, allowing complete control over the light in the room.

Dekro Roman Blinds

ROMAN BLIND FOR ROOF AND BAY WINDOWS

The Roof Roman Blind is unquestionably one of the most advanced solutions available on the market, designed for covering skylight windows. This system not only fully serves its purpose of protecting against intense sunlight but also brings unique aesthetics and an exclusive character to the room. It is not just a practical solution but also a decorative element that gives the interior a modern and elegant look. The Roof Roman Blind offers two mounting options, making it a versatile solution for different interior arrangements. It can be installed above the window recess, adding a sense of lightness and elegance to the space, or within the window recess itself, providing a more integrated look with the entire window structure. Installation within the window recess relies on special guides to which the fabric is attached using precision clips, creating a seamless integration with the blind.

Moreover, the Roof Roman Blind not only protects against excessive sunlight but also offers the possibility to adjust the light intensity through precise control. This gives the user full control over the atmosphere in the room, tailoring it to their needs and preferences. In this way, the Roof Roman Blind becomes not only a functional element but also a design accent that emphasizes the style and sophistication of every space, adding a unique character to it.

Dekro Roman Blinds

"VENETIAN ROMAN BLIND"

The Venetian Roman Blind is an extraordinary solution that not only perfectly covers the window but also imparts a unique character to the room. This blind has much to offer in terms of both aesthetics and functionality. When rolled up, it forms a beautiful pelmet, giving it a decorative character and becoming a distinctive decorative element in the room. However, what sets the Venetian Roman Blind apart is its ability to change its appearance depending on the situation. When unfolded, this blind resembles a delicate curtain or sheer, adding subtlety and elegance to the room. It's amazing how one window can have a different character depending on the setting of this blind.

This blind model is sewn on special vertical tapes, which play a crucial role in creating the characteristic wave effect. When the blind is raised, these tapes cause the fabric to ripple from the bottom, adding lightness and movement. This is not only an aesthetic advantage but also an excellent solution for adjusting the light in the room.

The Venetian Roman Blind is a choice for those who appreciate variability and individual character in interior design. It is a blind that combines functionality, unique design, and the ability to adapt to different situations, creating beauty in both the rolled-up and unfolded states.

Dekro Roman Blinds

"ENGLISH ROMAN BLIND"

The English Roman Blind is an excellent complement for any elegant interior. It is characterized by specific pelmets that arrange themselves gracefully from the bottom of the blind when it is raised. It is these pelmets that give the blind its distinctive appearance, which is unique among various types of Roman blinds. The waves in English blinds differ from those created when raising Venetian or Austrian blinds. A special sewing technique, creating so-called pleats, is used in English blinds. This makes the pelmets larger, more pronounced, and spectacular. The pelmets in English Roman Blinds are true works of art that bring elegance and charm to the window and the entire room.

This blind is the perfect choice for those seeking not only functional window covering but also a decorative element that will bring a unique character to the interior. The English Roman Blind is a blend of tradition and modernity, creating an elegant and stylish window arrangement that will surely catch the eye.

Dekro Roman Blinds

"AUSTRIAN ROMAN BLIND"

The Austrian Roman Blind is a solution that blends perfectly with both traditional and modern interiors. One of its undeniable advantages is its unique appearance, which even when the blind is fully extended, resembles a traditional curtain. This combination of modernity and classic charm adds a distinctive character to the interior.

In this model of the Austrian Roman Blind, a special tape with gathering is used instead of the traditional velcro, along with vertical tapes, giving it a more pronounced and decorative character. When the blind is raised, elegant waves, called pelmets, are formed. This effect gives the blind an extraordinary look, reminiscent of delicately draped curtains.

The Austrian Roman Blind is a unique blend of tradition and modernity. It is an excellent choice for those who appreciate unique design, elegance, and the individual character of the interior. This blind is an excellent example of how functionality can be combined with beauty, creating a unique and unparalleled window decor.
